

# TAKATA CRISIS : FRENCH GUIANA STILL IN A STATE OF EMERGENCY

As part of the global recall campaign addressing defective airbags supplied by Takata, the NCCIE wishes to remind the public that **3,416 vehicles in French Guiana from the brands Toyota, Lexus, Opel, Chevrolet, and Ford are still affected** and must urgently be brought to a workshop for a safety replacement procedure.

It is also crucial to highlight that **owners of vehicles imported directly, via independent dealers, or relocated to French Guiana as part of a move must contact the NCCIE**. This step is necessary to register their vehicles and ensure they are correctly identified under the Takata recall program, safeguarding both the drivers and their passengers.

Since the launch of the campaign, NCCIE teams have remained fully mobilized. **They would like to extend their sincere thanks to the 267 customers who have had their airbag replaced during the first four months of 2025.** This proactive response is vital and must be amplified to prevent potentially fatal accidents caused by defective airbags.

## A Priority, Free and Quick Procedure

The **NCCIE workshop continues to give absolute priority to Takata airbag replacements**. All necessary parts are in stock, and the **replacement service is entirely free of charge** for eligible vehicle owners. The procedure is also fast, with average vehicle downtime of **less than three hours**.

## About the Takata Airbag Recall

The Takata airbag crisis concerns a serious safety defect involving airbags manufactured by the Japanese company Takata. The issue came to light after it was discovered that some airbags could rupture upon deployment, posing a potentially fatal risk. These malfunctions have been linked to severe injuries and even deaths.

The affected airbags were installed between 2002 and 2017 by 19 automakers across 34 global brands. As of the end of 2023, over 30 deaths worldwide including 26 in the United States had been attributed to these failures, along with more than 400 injuries globally caused by explosive airbag ruptures.
